

## Q15-20 Answers: **SampleExam1Questions\_SelectedFromQuestionsActuallyWrittenInThePast**

### Question 15

### Question 16

The calling function is responsible for preserving the contents of caller-saved registers and the called function for preserving callee-saved registers.

### Question 17

F

### Question 18

Because there're 32 general purpose registers in the architecture ( $2^5 = 32$ ).

### Question 19

```
intArray:    .word 1, 2, 3, 4, 5
```

### Question 20

```
.data
prompt:      .ascii "Enter 2 integers: "
outStr1:     .ascii " is the product of "
outStr2:     .ascii " and "

.text
.globl main
main:
    la $a0, prompt
    li $v0, 4
    syscall                                     # print prompt
    li $v0, 5
    syscall                                     # read 1st integer
    addu $t1, $v0, $zero                       # save 1st integer in $t1
    li $v0, 5
    syscall                                     # read 2nd integer
    addu $t2, $v0, $zero                       # save 2nd integer in $t2
    mul $t3, $t1, $t2                          # $t3 has lower 32 bits of product
    li $v0, 1
    addu $a0, $t3, $zero
    syscall                                     # print product
    la $a0, outStr1
    li $v0, 4
    syscall                                     # print outStr1
    li $v0, 1
    addu $a0, $t1, $zero
    syscall                                     # print 1st integer
    la $a0, outStr2
    li $v0, 4
    syscall                                     # print outStr2
    li $v0, 1
    addu $a0, $t2, $zero
    syscall                                     # print 2nd integer
    li $v0, 10
    syscall                                     # exit
```
